BIG DATA MARKET WITH COVID-19 IMPACT ANALYSIS

GLOBAL FORECAST TO 2026

REPORT BROCHURE WITH SAMPLE PAGES

REPORT CODE: TC 1521

INTRODUCTION

1.1 INTRODUCTION TO COVID-19

COVID-19 is an infectious disease caused by the novel coronavirus. Largely unknown before its outbreak in Wuhan, China, in December 2019, the Coronavirus Disease 2019 (COVID-19) moved from being a regional crisis to a global pandemic in just a few weeks. The World Health Organization (WHO) declared COVID-19 as a pandemic on March 11th, 2020.

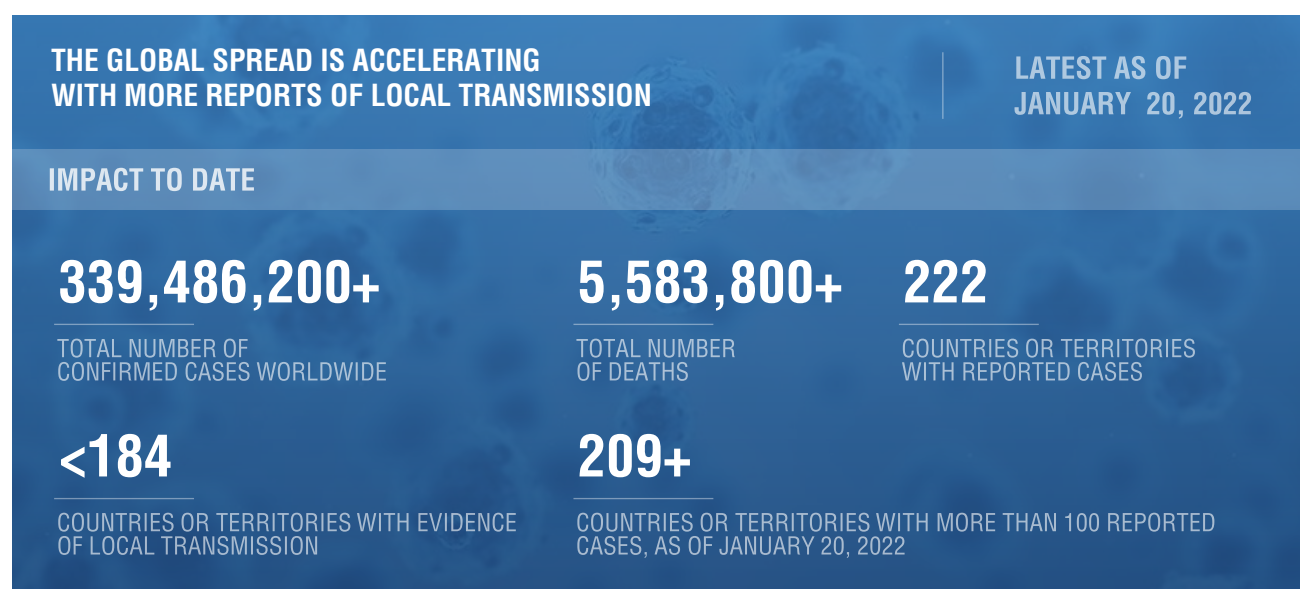

As the virus is spreading rapidly at a global level, countries across the globe are trying to prevent further contagion by adopting measures such as social distancing, contact tracing, self-quarantining, surveillance, communication, and testing. So far, China, South Korea, Japan, and Singapore have managed to flatten the curve, while the US, Italy, Spain, Germany, France, and Iran are imposing drastic measures to slow down the spread and control fatalities.

Government agencies have announced special financial aid packages toward developing preventive and curative drugs, the purchase of critical care medical devices, and the fast-track approval of diagnostic tests. Various organizations across the globe, such as the Bill and Melinda Gates Foundation and Wellcome Trust, are also coming together to accelerate and strengthen the efforts to fight the COVID-19 pandemic.

1.2 COVID-19 HEALTH ASSESSMENT

COVID-19 is an unprecedented crisis creating an enormous strain on healthcare providers across the globe. According to the WHO, within 67 days, the first 100,000 confirmed cases were reported worldwide. It took the first 11 days to reach 200,000 confirmed cases. In the next four days, the number reached 300,000 confirmed cases, while in another 12 days, the count reached one million confirmed cases.

FIGURE 1 COVID-19: GLOBAL PROPAGATION

Source: WHO and ECDC

As of January 2022, the virus has spread to more than 222 countries, with over 339,486,200 reported cases and close to 5,583,800 deaths.

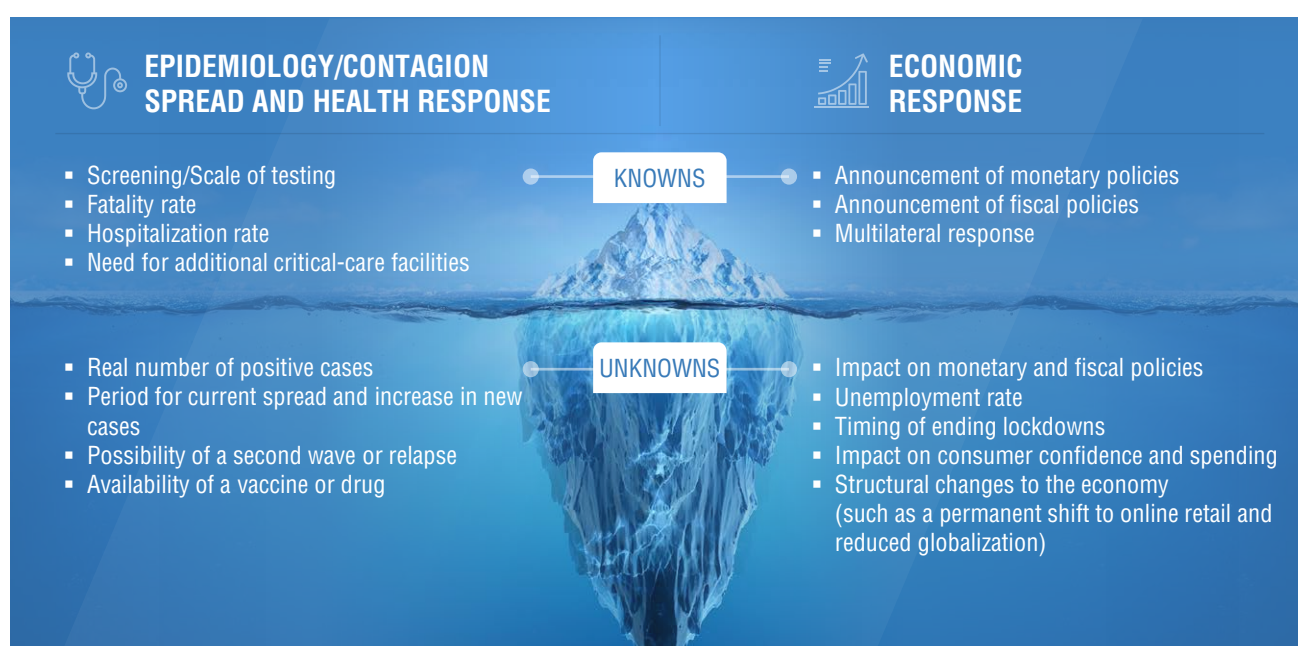

The actual number of infected people is probably higher than the official total, as some mild and asymptomatic cases are not tested and counted.

INTRODUCTION

1.2.1 COVID-19 ECONOMIC IMPACT—SCENARIO ASSESSMENT

Recovery from this crisis largely depends on various knowns and unknowns, which most countries will have to deal with and respond to. The speed and strength of the economic recovery will depend on the health and economic responses and the agility and speed of implementing various measures.

FIGURE 2 CRITERIA IMPACTING THE GLOBAL ECONOMY

In the recent past, the global economy has become substantially more interconnected. The adverse consequences of various steps related to containment are evident from global supply chain disruptions, weaker demand for imported products and services, and the increase in the unemployment rate. Risk aversion has increased in the financial market, with all-time-low interest rates and sharp declines in equity and commodity prices. Consumer and business confidence have also reduced significantly.

This has magnified over time, and the spillover is seen in other countries as well. The latest forecasts by multiple sources predict a four percent decrease in the global Gross Domestic Product (GDP) in 2020 and a slow recovery, making the recession caused by this pandemic worse than the 2009 global recession. Based on these forecasts, the global economy is expected to recover by 2021; however, for some countries, including the US, Germany, and Italy, recovery is predicted to take longer.

In this fast-changing environment, the full impact of the pandemic on the global economy may not entirely be known. MarketsandMarkets uses three scenario-based approaches (epidemiology, health response, and economic response) to assess the economic impact and recovery period at the global level. Countries and regions are expected to have different impacts and recovery periods.

INTRODUCTION

1.3 OBJECTIVES OF THE STUDY

- To define, describe, and forecast the big data market by component (solutions and services), business function, deployment mode, organization size, vertical, and region
- To provide detailed information related to the major factors (drivers, restraints, opportunities, and challenges) influencing the growth of the market
- To analyze subsegments with respect to the individual growth trends, prospects, and contribution to the total market
- To analyze the opportunities in the market for stakeholders and provide a competitive landscape of the market
- To forecast the revenue of the market segments with respect to all the major regions, namely, North America, Europe, Asia Pacific (APAC), the Middle East & Africa (MEA), and Latin America (LA)
- To profile the key players and comprehensively analyze their recent developments and positioning related to the big data market
- To analyze competitive developments, such as mergers and acquisitions, new product launches and developments, and Research and Development (R&D), activities in the market
- To analyze the impact of the COVID-19 pandemic on the big data market

1.4 MARKET DEFINITION

According to SAS Institute, big data refers to the large volume of data—both structured and unstructured—that inundates a business on a day-to-day basis. But it is not the amount of data that is important; it is what organizations do with the data that matters. Big data can be analyzed for insights that lead to better decisions and strategic business moves. Big data solutions include big data analytics, data discovery, data visualization, and data management solutions. Various organizations are deploying big data solutions to harness the power of big data by managing it efficiently and analyzing it to get actionable insights. The massive growth of data and an increase in the number of mobile apps and Internet of Things (IoT) devices are the major factors driving the big data market.

1.5 MARKET SCOPE

This study provides an analysis of the global big data market since 2017, based on contemporary market trends and developments and its potential growth from 2021 to 2026. It provides detailed market trends, vendors' market shares, market size, forecasts, and analysis of key players in the big data market.

INTRODUCTION

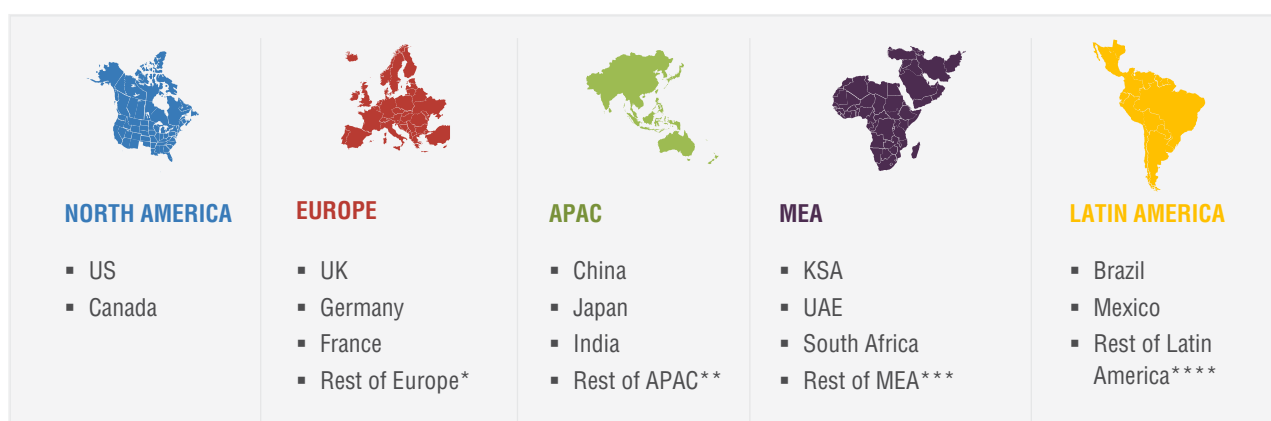

1.5.1 MARKET SEGMENTATION

*Other verticals include real estate, energy and utilities, travel and hospitality, and education and research.

Source: MarketsandMarkets Analysis

1.5.2 REGIONS COVERED

*Rest of Europe includes Italy, Spain, Sweden, and Denmark.

**Rest of APAC includes ANZ, South Korea, Singapore, and Malaysia.

***Rest of MEA includes Israel, Qatar, Turkey, and Kuwait.

****Rest of Latin America includes Argentina, Colombia, Peru, and Chile.

INTRODUCTION

1.5.3 YEARS CONSIDERED FOR THE STUDY

Source: MarketsandMarkets Analysis

- The period considered for market forecast ranges from 2021 to 2026.
- The financial year considered for most company profiles is 2021. In case the data was unavailable for the base year for specific companies, the data from the previous year was considered.
- The period considered for the study of the competitive landscape ranges from May 2019 to January 2022.

1.6 CURRENCY CONSIDERED

The currency used in the report is the United States dollar (USD), with the market size indicated in USD billion/USD million.

- ISO 4217 codes are used to depict currency names; the market size, in terms of value, is represented using "USD."
- The market has mainly been studied in terms of USD million, with certain values provided in USD billion; the denomination is based on the size of the values, enabling uniform accommodation of these values in the tables, figures, or any form of study of the particular segments.
- For companies reporting their revenues in US dollars (USD), the data has been taken from their annual reports.
- For companies that reported their revenue in other currencies, the average annual currency conversion rate used for that particular year has been taken from the US IRS to convert the values to US dollars.

TABLE 1 USD EXCHANGE RATE, 2018-2021

CURRENCY	2018	2019	2020	2021
EUR	1.13	1.18	1.12	1.20

Source: US IRS

INTRODUCTION

1.7 STAKEHOLDERS

- Big data vendors
- Application design and software developers
- System integrators
- Value-added resellers (VARs)
- Government agencies
- Data scientists
- Business analysts
- Information Technology (IT) service providers
- Consulting service providers
- Managed service providers
- Market research and consulting firms
- Cloud service providers

1.8 SUMMARY OF CHANGES

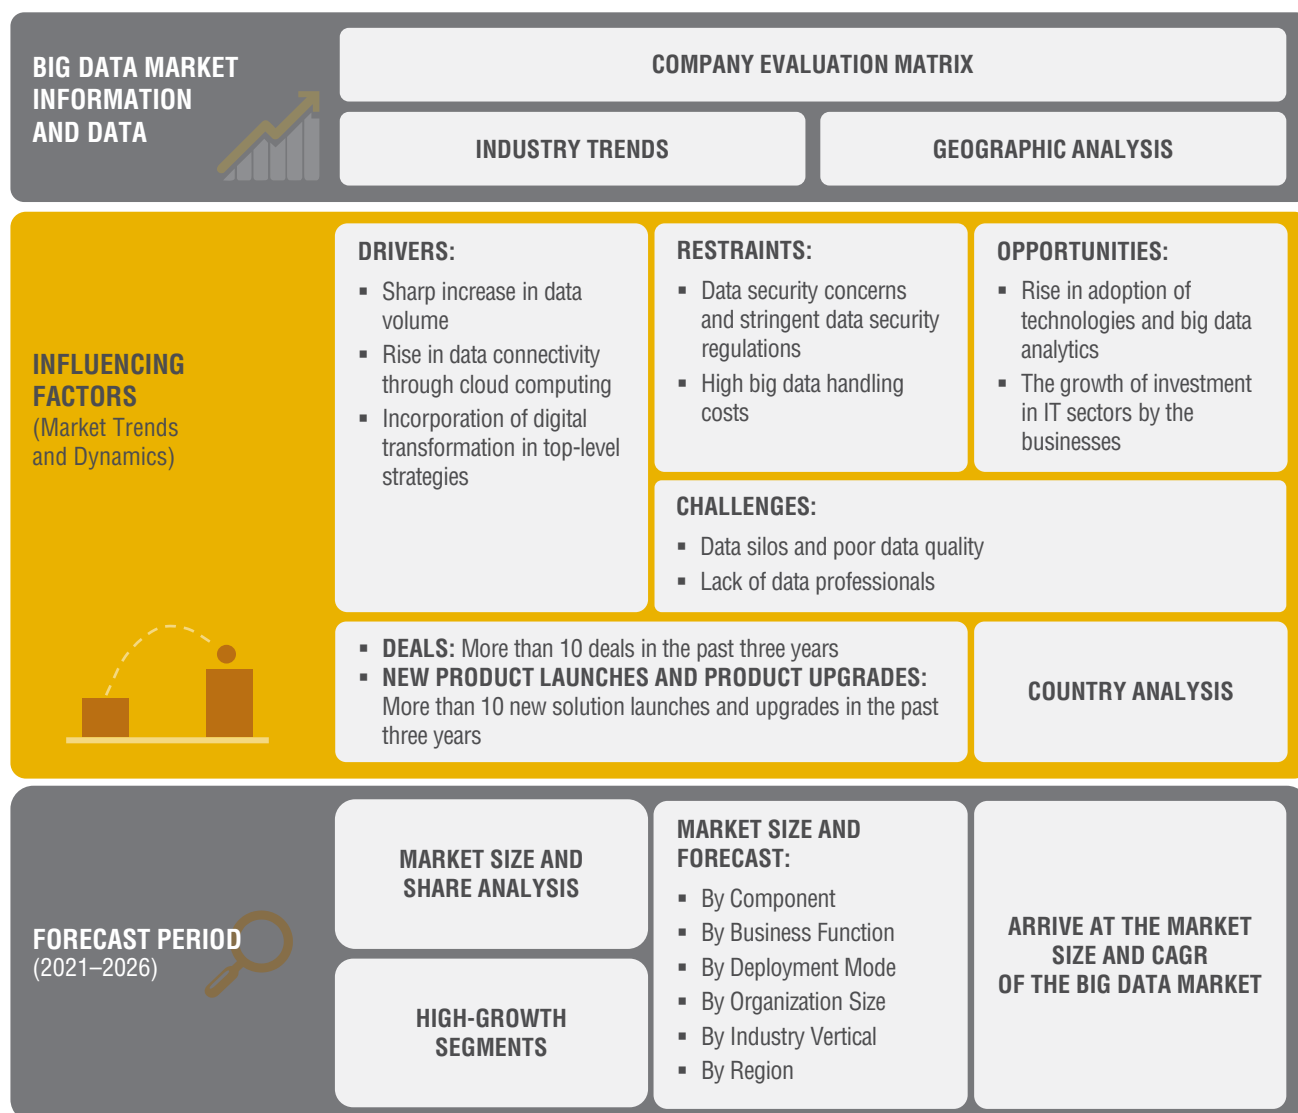

- The updated study is segmented by component, deployment mode, organization size, business function, vertical, and region.
- The new research study consists of supply chain analysis, technology analysis, patent analysis, ecosystem, and porters five forces model specific to the big data market.
- The new study comprises detailed case studies cases from different industry verticals.
- The new research study includes the COVID-19 impact on the overall big data market as well as on segments and regions.
- The new study also comprises operational drivers for the adoption in segments and regions.
- The new market study consists of the region-wise regulatory landscape.
- The new research study consists of 33 players.
- Competitive leadership mapping of 33 vendors in the big data market based on the solution and service portfolios and the business strategy in the market.
- The new edition of the big data report includes startup Micro Quadrant (MQ).
- The updated financial information/product portfolio of players: The new edition of the report provides updated financial information in the context of the big data market till 2020–2021 for each listed company in the graphical representation.
- The new research study includes the updated market developments of profiled players. It also includes the market developments from 2019 to 2022.
- The new study includes quantitative data for historical years (2016–2019), base year (2020), and forecast years (2021–2026).
- The new study also includes quantitative data of adjacent markets.

RESEARCH METHODOLOGY

2.1 RESEARCH DATA

This research study involved the use of extensive secondary sources, directories, and databases, such as D&B Hoovers and Bloomberg, to identify and collect information useful for this technical, market-oriented, and commercial study of the global big data market. The primary sources were mainly industry experts from core and related industries and preferred suppliers, manufacturers, distributors, service providers, technology developers, alliances, and organizations related to all segments of this industry's value chain. In-depth interviews were conducted with various primary respondents that included key industry participants, subject matter experts, C-level executives of key market players, and industry consultants to obtain and verify critical qualitative and quantitative information as well as assess the prospects. The following illustrative figure highlights the market research methodology applied in making this report on the global big data market:

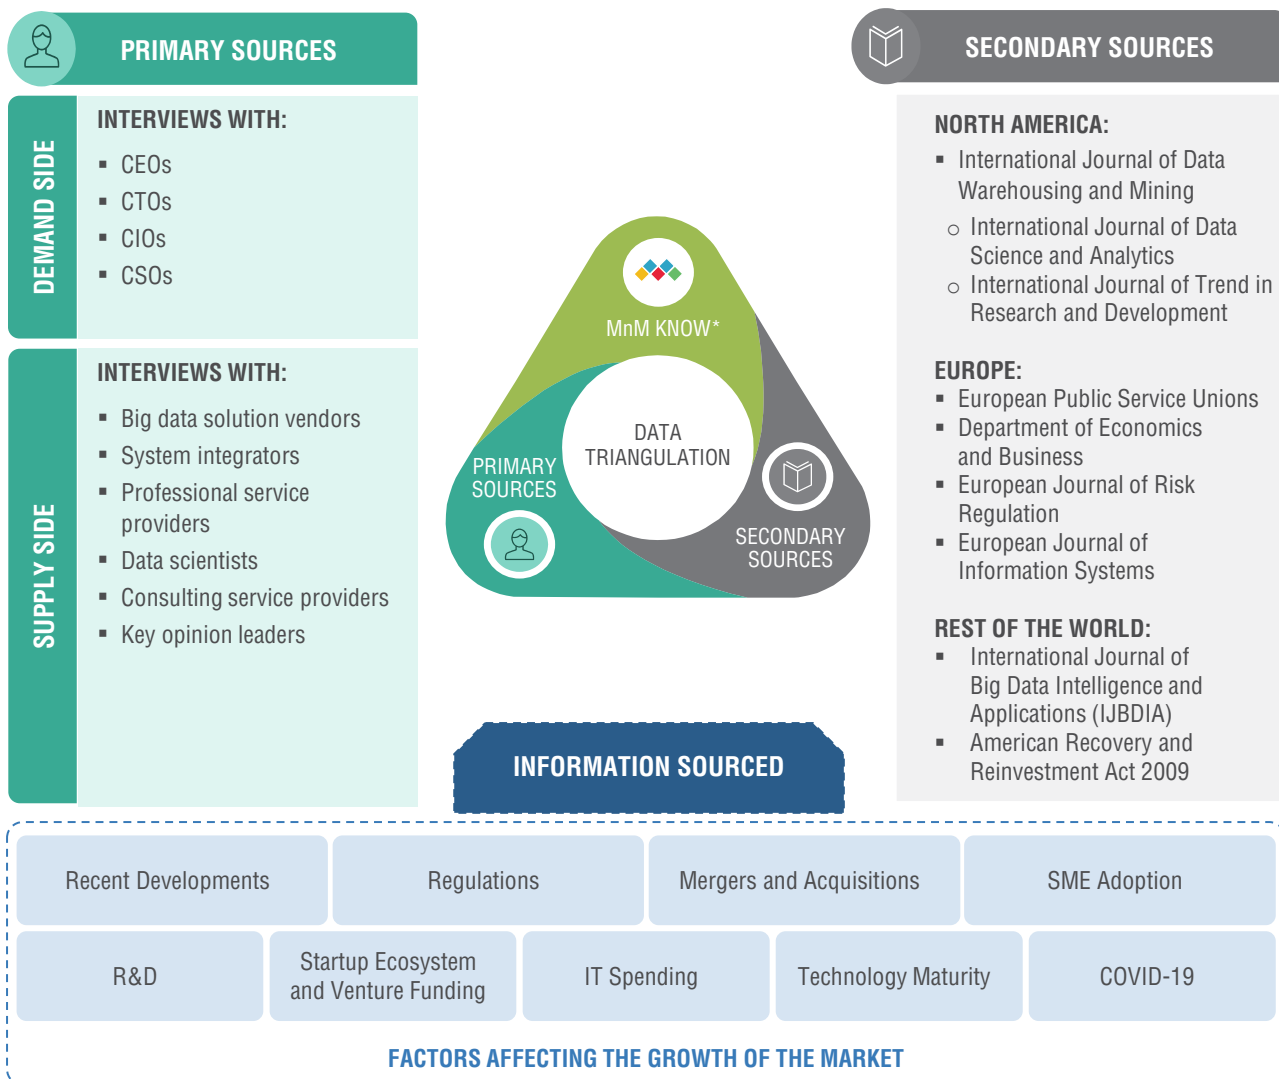

FIGURE 3 BIG DATA MARKET: RESEARCH DESIGN

Source: Secondary Research, Industry Experts, and MarketsandMarkets Analysis

RESEARCH METHODOLOGY

2.2 MARKET BREAKUP AND DATA TRIANGULATION

*MnM KNOW stands for MarketsandMarkets' "Knowledge Asset Management" framework. It refers to the existing market research knowledge repository of over 5,000 granular markets, our flagship competitive intelligence and market research platform "Knowledge store", subject matter experts, and independent consultants. MnM KNOW acts as an independent source that helps us validate information gathered from the primary and secondary sources. MarketsandMarkets' reports such as Analytics as a Service Market, Big Data as a Service Market, and Data Lake Market are referred to for making this report.

Source: MarketsandMarkets Analysis

2.2.1 TOP-DOWN APPROACH

In the top-down approach, an exhaustive list of all the vendors who offer software and services in the big data market was prepared. The revenue contribution for all the vendors in the market was estimated through annual reports, press releases, funding, investor presentations, paid databases, and primary interviews. Each vendor was evaluated based on their products/services by technology, component, industry vertical, and region. The aggregate of all companies' revenue was extrapolated to reach the overall market size. Each subsegment was studied and analyzed for its global market size and regional penetration. The markets were triangulated through both primary and secondary research. The primary procedure included extensive interviews for key insights from the industry leaders, such as CEOs, VPs, directors, and marketing executives. These market numbers were further triangulated with the existing MarketsandMarkets repository for validation.

RESEARCH METHODOLOGY

2.2.2 BOTTOM-UP APPROACH

In the bottom-up approach, the adoption of big data software and services in different end users in key countries with respect to their region that contributes to the majority of the market share was identified. Furthermore, for cross-validation, the adoption of big data software and services in different industries along with different use cases with respect to their region has been identified and extrapolated. In addition, weightage has been given to the use cases identified in different regions for the calculation.

Based on these numbers, the regional split was determined by primary and secondary sources. The procedure included an analysis of the big data market's regional penetration. Based on the secondary research, the regional spending on Artificial Intelligence (AI), big data and Information and Communications Technology (ICT), socioeconomic analysis of each country, strategic vendor analysis of the major big data providers, and organic and inorganic business development activities of regional and global players were estimated. With the data triangulation procedure and validation of data through primaries, the exact values of the overall big data market size and its segments' market size were determined and confirmed using this study.

2.3 LIMITATIONS OF THE STUDY

METHODOLOGY- RELATED LIMITATIONS

- The report focuses on offerings of major vendors in the big data market. The market size estimation is done based on the approximation of the market ranking/contribution of these vendors, along with corresponding investments by various regulatory bodies in the market.
- The overall market size is arrived at using a holistic and systematic approach.

SCOPE- RELATED LIMITATIONS

- Revenue from hardware/devices and other hardware solutions is not considered while calculating the market size of the big data market.
- The report is focused on the B2B business model; the B2C model is not considered in the report.
- Big data solutions offered by MSPs are not considered for forecasting the market size.

TABLE OF CONTENTS

1 INTRODUCTION (PAGE NO. 30)

- 1.1 Introduction to COVID-19
- 1.2 COVID-19 Health Assessment
- 1.3 COVID-19 Economic Assessment
 - 1.3.1 COVID-19 Economic Impact—Scenario Assessment
- 1.4 Objectives of the Study
- 1.5 Market Definition
 - 1.5.1 Inclusions and Exclusions
- 1.6 Market Scope
 - 1.6.1 Market Segmentation
 - 1.6.2 Regions Covered
 - 1.6.3 Years Considered for the Study
- 1.7 Currency Considered
- 1.8 Stakeholders
- 1.9 Summary of Changes

2 RESEARCH METHODOLOGY (PAGE NO. 40)

- 2.1 Research Data
 - 2.1.1 Secondary Data
 - 2.1.2 Primary Data
 - 2.1.2.1 Breakup of Primary Profiles
 - 2.1.2.2 Key Industry Insights
- 2.2 Market Breakup and Data Triangulation
- 2.3 Market Size Estimation
 - 2.3.1 Top-Down Approach
 - 2.3.2 Bottom-Up Approach
- 2.4 Company Evaluation Matrix
- 2.5 Startup/SME Evaluation Matrix Methodology
- 2.6 Assumptions for the Study
- 2.7 Limitations of the Study

3 EXECUTIVE SUMMARY (PAGE NO. 52)

4 PREMIUM INSIGHTS (PAGE NO. 59)

- 4.1 Attractive Opportunities in the Big Data Market
- 4.2 Big Data Market: Top Three Verticals
- 4.3 Big Data Market, By Region
- 4.4 North America: Big Data Market, By Application and Industry Vertical

5 MARKET OVERVIEW AND INDUSTRY TRENDS (PAGE NO. 62)

- 5.1 Introduction
- 5.2 Market Dynamics
 - 5.2.1 Drivers
 - 5.2.1.1 Sharp Increase in Data Volume
 - 5.2.1.2 Rise in Data Connectivity Through Cloud Computing
 - 5.2.1.3 Incorporation of Digital Transformation in Top-Level Strategies
 - 5.2.2 Restraints
 - 5.2.2.1 Data Security Concerns and Stringent Data Security Regulations
 - 5.2.2.2 High Big Data Handling Costs
 - 5.2.3 Opportunities
 - 5.2.3.1 Rise in Adoption of Technologies and Big Data Analytics
 - 5.2.3.2 The Growth of Investment in IT Sectors By the Businesses
 - 5.2.4 Challenges
 - 5.2.4.1 Data Silos and Poor Data Quality
 - 5.2.4.2 Lack of Data Professionals
- 5.3 Use Cases
 - 5.3.1 Banking, Financial Services, and Insurance
 - 5.3.1.1 Use Case 1: Erste Group Bank Gains A 360-Degree View of Customers Using Oracle Big Data Appliance on A Single Cloud Platform
 - 5.3.2 Telecommunication and Information Technology
 - 5.3.2.1 Use Case 2: Robi Axiata Limited Uses the Cloudera Platform to Enhance Customer Experience

TABLE OF CONTENTS

5.3.3	Retail and Consumer Goods
5.3.3.1	Use Case 4: Myntra Uses Azure Synapse Analytics and Azure HDInsight to Stabilize Services and Increase Year-Over-Year Traffic
5.3.4	Government and Defense
5.3.4.1	Use Case 5: Indian Oil Uses QLIK to Achieve Business Value By Providing Analytics on the Real-Time and Big Data
5.3.5	Media and Entertainment
5.3.5.1	Use Case 6: Dwango Company Ltd. Uses the Cloudera Big Data Platform, and Advanced Analytics Enables Expansion and Business Growth
5.3.6	Manufacturing
5.3.6.1	Use Case 7: Brembo Uses Tibco Spotfire to Enhance Production Processes with the help of Big Data
5.3.7	Healthcare and Life Science
5.3.7.1	Use Case 8: IQVIA Uses QLIK Big Data Analytics to help UK Healthcare Services
5.3.8	Transport and Logistics
5.3.8.1	Use Case 9: Cargosmart Uses TIBCO Spotfire for Greater Visibility and Benchmarking
5.4	Patent Analysis
5.4.1	Methodology
5.4.2	Document Type
5.4.3	Innovation and Patent Applications
5.4.3.1	Top Applicants
5.5	Big Data: Evolution
5.6	Big Data: Architecture
5.7	Big Data Types
5.8	Big Data Analytics Types
5.9	Big Data Ecosystem
5.10	Supply Chain Analysis
5.11	Pricing Model Analysis
5.12	Trends/Disruptions Impacting Buyers/Clients in the Big Data Market

5.13	Porter's Five Forces Analysis
5.13.1	Threat of New Entrants
5.13.2	Threat of Substitutes
5.13.3	Bargaining Power of Suppliers
5.13.4	Bargaining Power of Buyers
5.13.5	Intensity of Competitive Rivalry
5.14	Technological Analysis
5.14.1	Artificial Intelligence and Machine Learning
5.14.2	Internet of Things
5.14.3	Cloud Computing
5.15	Regulatory Implications
5.15.1	General Data Protection Regulation
5.15.2	Health Insurance Portability and Accountability Act
5.15.3	Payment Card Industry Data Security Standard

1 EXECUTIVE SUMMARY

Big data is a term that refers to the large volume of data—structured, unstructured, or semi-structured. Big data solutions are gaining traction, and the technology has tremendous growth possibilities in the coming years. Companies have started deploying big data solutions to extract value from huge data sets. These data sets, when analyzed using big data analytical solutions, can provide actionable insights to organizations. These insights help organizations take quick decisions and provide customer-centric solutions. In the past few years, big data has gained traction in the technological landscape. Moreover, the cost-effectiveness of big data solutions and secure data assurance have led to the increased adoption of big data solutions.

Businesses across industry verticals are deploying big data solutions to harness the power of big data by managing it efficiently and analyzing it to get actionable insights. The massive growth of data and an increase in the number of mobile apps and IoT devices are the factors contributing to the growth of the big data market. Big data is widely used in various industries, such as banking, financial services, and insurance (BFSI); government and defense; healthcare and life sciences; manufacturing; retail and consumer goods; media and entertainment; telecommunications and IT; transportation and logistics; and others (real estate, energy and utilities, travel and hospitality, education, and research).

Various factors such as plummeting technology costs and development of open source big data software frameworks, data connectivity through hybrid and multi-cloud environments, and incorporation of digital transformation in top-level strategies are expected to drive the adoption of big data solutions and services. Integration of AI, IoT, and blockchain with big data and strengthening the regulatory landscape for data protection would provide opportunities for the growth of organizations in the market. However, the market faces restraints, such as a lack of skilled workforce and complexity in insights extraction. The disconnect between consumers and businesses leading to increased privacy and security concerns is a challenge faced in the adoption of big data solutions. Aspects, such as the internal architecture of big data solutions, the distinction between real-time versus non-real-time processing, the precise characteristics of the analytics services, the need for data storage and modeling, the delivery over hybrid cloud models and several others, make the design of big data solutions complex. The value lies in the data and not in the technology used to process it. Big data includes solutions, such as big data analytics, data discovery, data visualization, and data management. Information processing, together with analytics systems, comes with special features for efficient computing and business analytics.

Based on regions, North America is estimated to have the largest market size in 2020, followed by Europe; this growth can be attributed to the technological upgradations and different regulations imposed over business operations in these regions. Being an early adopter of technologies, North America is an innovation hub. The rise in data collection from unstructured sources is one of the key driving factors impacting the growth of the big data market in North America. It is also a developed capital market and has a well-established financial setup. The region is expected to present strong opportunities for big data vendors to expand in this market. Countries in Europe are considering the deployment of big data solutions. The adoption of big data solutions and services is expected to rise in APAC and MEA due to the growing demand for IoT-based technologies in these regions and mounting pressure from regulatory bodies. A sudden rise in the application of social media is a key factor driving the growth of big data solutions in APAC. Businesses are emphasizing studying customer behavior patterns to make their strategies more effective. The growth in the MEA region can be attributed to the growing adoption of IoT and cloud, and growth in competition, which demands simplified and enhanced data visualization tools. The companies adopt big data solutions and services to extract value from the vast volumes of business data and gain faster and actionable insights.

Apart from creating numerous opportunities, globalization has introduced data-related vulnerabilities to enterprises. Therefore, enterprises are searching for solutions to mitigate the impact of such situations. Big data solutions find applications in business functions such as finance, marketing and sales, human resources, and operations. Using big data solutions in these business functions helps business users determine sales patterns, evaluate internal processes, enhance operations, determine creditworthiness and market volatility, perform precise buyer segmentation, and predict leadership needs.

Based on industry verticals, the BFSI segment is estimated to account for the highest market share in the big data market, whereas the healthcare and life sciences industry vertical is projected to have the highest growth rate in the big data market during the forecast period. The BFSI industry vertical uses big data to boost organizational success and ensure risk management, profitable growth, and performance. The big data technology, when combined with other technologies such as IoT and blockchain, can allow banks and collaborators to share data across different countries, users, and counterparties. It has the potential to make data-driven services more powerful. Big data solutions help create a more flexible and agile business model to take care of the growing business needs. These solutions create an opportunity for bankers to connect with their customers directly. The key use cases of big data in BFSI include predictive analytics, fraud and malicious attack protection, and customer analytics.

The global big data market has been segmented by component, deployment mode, organization size, business function, industry vertical, and regions. The component segment is further categorized into solutions and services. Based on the solutions, the market is divided into big data analytics, data discovery, data visualization, and data management. The services segment is further divided into managed services and professional services. The professional services segment includes consulting, deployment and integration, and support and maintenance services. The deployment mode segment is categorized into on-premises and cloud. The cloud deployment mode is further segmented into the hybrid cloud, public cloud, and private cloud. Based on organization size, the market is divided into large enterprises and SMEs. Based on business functions, the market is segmented into finance, marketing and sales, human resources, and operations. The industry verticals segment includes banking, financial services, and insurance (BFSI); government and defense; healthcare and life sciences; manufacturing; retail and consumer goods; media and entertainment; telecommunications and IT; transportation and logistics; and others (real estate, energy and utilities, travel and hospitality, education, and research). This market study has been segmented into five regions: North America, Europe, APAC, MEA, and Latin America.

Some of the major players in the big data market include IBM (US), Google (US), Oracle (US), Microsoft (US), SAS (US), SAP (Germany), Alteryx (US), TIBCO (US), Cloudera (US), Teradata (US), AWS (US), Informatica (US), Sisense (US), Salesforce (US), HPE (US), Qlik (US), Splunk (US), VMware (US), Accenture (Ireland), Ataccama (Canada), COGITO (US), Centerfield (US), Datapine (Berlin), Fusionex (Malaysia), BigPanda (US), Bigeye (US), Impley (US), Rivery (US), YugabyteDB (US), Airbyte (US), Cardagraph (US), Firebolt (US), and Syncari (US). Partnerships, new product developments, mergers & acquisitions, and product enhancements are some of the key strategies implemented by the major vendors in the big data market.

3 MARKET OVERVIEW AND INDUSTRY TRENDS

3.1 INTRODUCTION

The market overview chapter offers detailed information about the factors responsible for the growth of the big data market. It comprises market dynamics, such as drivers, restraints, opportunities, and challenges. It also explains the impact of use cases and various industry standards on the market. Globally, companies are rapidly adopting big data to gain a competitive advantage in the market.

The key players in the big data market include IBM (US), Oracle (US), Microsoft (US), AWS (US), SAP (Germany), Google (US), SAS (US), Alteryx (US), TIBCO (US), Cloudera (US), Teradata (US), Informatica (US), Sisense (US), Salesforce (US), HPE (US), Qlik (US), Splunk (US), VMware (US), Accenture (Ireland), Ataccama (Canada), COGITO (US), Centerfield (US), Datapine (Berlin), Fusionex (Malaysia), BigPanda (US), Bigeye (US), Impley (US), Rivory (US), YugabyteDB (US), Airbyte (US), Cardagraph (US), Firebolt(US), Syncari (US).

3.2 MARKET DYNAMICS

The big data market is projected to grow at a significant rate during the forecast period due to various business drivers. The drivers, restraints, opportunities, and challenges impacting the growth of the big data market are listed below:

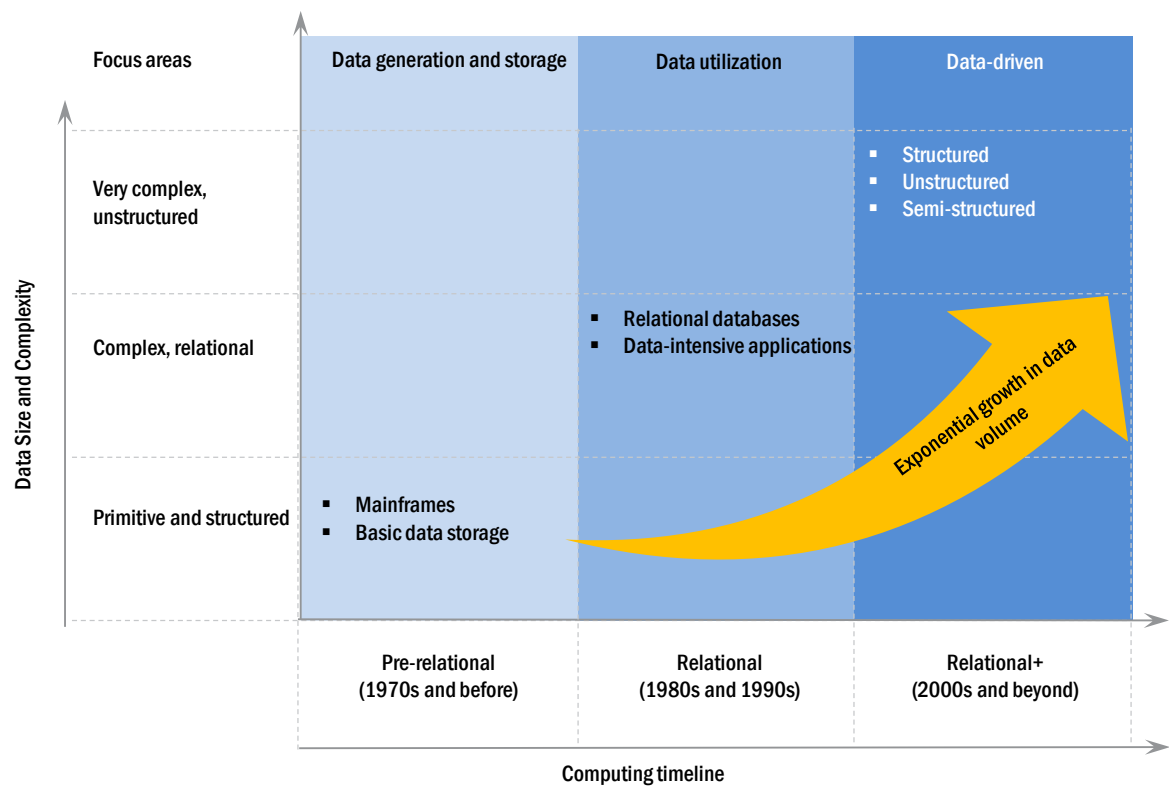

FIGURE 3 DRIVERS, RESTRAINTS, OPPORTUNITIES, AND CHALLENGES:
BIG DATA MARKET

 DRIVERS	▪ Sharp increase in data volume ▪ Rise in data connectivity through cloud computing ▪ Incorporation of digital transformation in top-level strategies
 RESTRAINTS	▪ Data security concerns and stringent data security regulations ▪ High big data handling costs
 OPPORTUNITIES	▪ Rise in adoption of technologies and big data analytics ▪ The growth of investment in IT sectors by the businesses
 CHALLENGES	▪ Data silos and poor data quality ▪ Lack of data professionals

4 BIG DATA MARKET, BY INDUSTRY VERTICAL

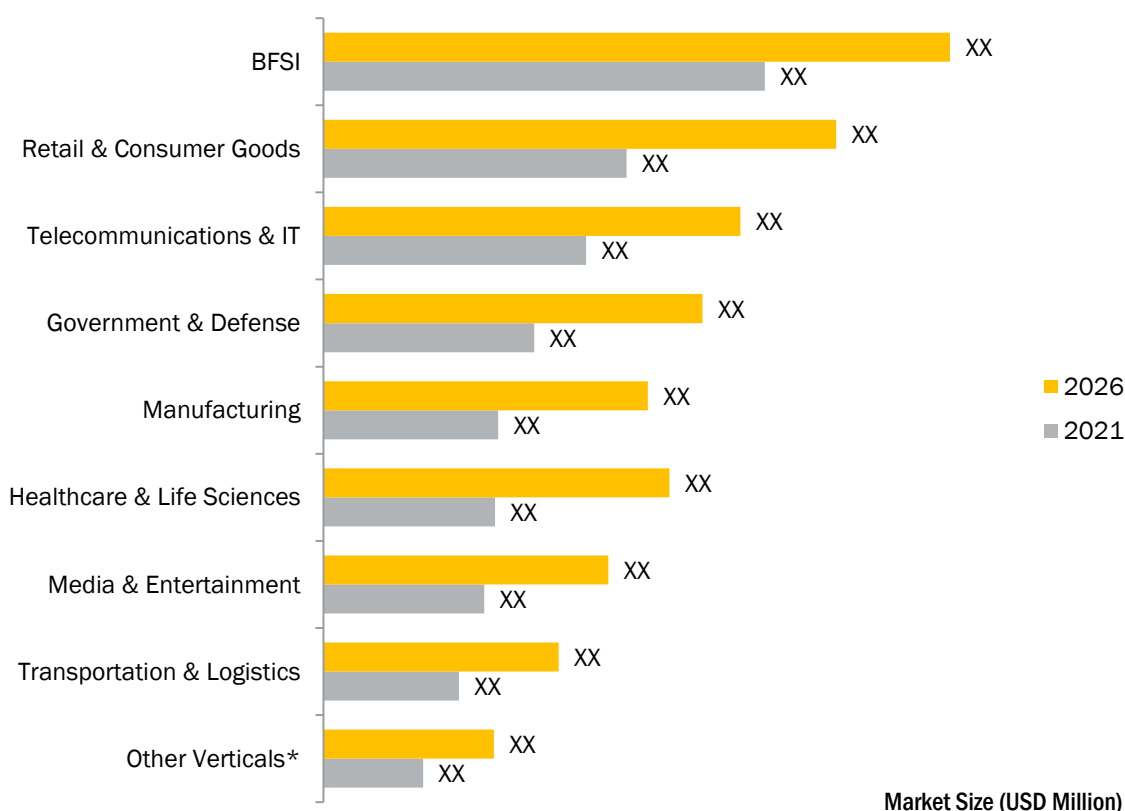

KEY FINDINGS

- The telecommunication and IT industry vertical is estimated to grow from USD XX million in 2021 to USD XX million by 2026, at a CAGR of XX% during the forecast period.
- The increasing demand for real-time smart grid visibility and load forecasting from the energy and utilities industry vertical is driving the adoption of big data in the market.
- The healthcare and life sciences industry vertical is projected to grow from USD XX million in 2021 to USD XX million by 2026, at the highest CAGR of XX% during the forecast period.
- The growing demand for big data and supply chain management applications is paving the way for the manufacturing sector to prefer a big data solution
- The media and entertainment industry vertical is projected to grow from USD XX million in 2021 to USD XX million by 2026, at a CAGR of XX% during the forecast period.

4.1 INTRODUCTION

Considering the technological advancements and big data implementation across industry verticals, the demand for big data is likely to gain traction in the coming years. Big data solutions, such as big data management and data visualization, help enterprises analyze data through dashboards, offering a statistical representation of the data to make faster business decisions. Big data solutions further help in real-time decision analytics and eliminate the need for data modeling at the time of ingestion, which helps companies store multi-structured data from diverse sources. Data discovery solutions help industries analyze patterns and discover current trends to remain competitive. Big data solutions are gaining acceptance among all industry verticals to improve profitability and reduce overall costs. The major industry verticals adopting big data solutions and services include BFSI, government and defense, healthcare and life sciences, manufacturing, retail and consumer goods, media and entertainment, telecommunications and IT, transportation and logistics, and others (real estate, energy and utilities, travel and hospitality, and education and research). Enterprises across industry verticals are making use of big data to increase operational efficiency to improve their production and efficiency of operations. Moreover, enterprises would get an opportunity to change the way businesses operate and pave the way for innovative processes and operations across industry verticals.

4.2 TELECOMMUNICATIONS AND IT

Big data is utilized across all telecommunication enterprises to smoothen the supply chain, understand targets, and craft marketing campaigns. For instance, network optimization has become an essential part of the telecommunications industry. Big data facilitates better customer experiences. Optimizing a cellular network involves making numerous decisions supported by analytics based on real-time data analysis. This optimization helps make businesses stronger, prone to lower risks, and achieve better outcomes. The number of users engaged with the telecommunications business is rapidly increasing. As a result, pricing has evolved as a technique for reducing congestion while also increasing revenue. A dynamic pricing strategy entails mapping lifetime values, tariffs, channels for calculating price elasticity, and a pricing plan to combine this information. The interdependencies between promotion, pricing, and future revenues can then be described using these findings. It aids the telecom sector in effectively establishing its wide networks. It aids in fraud detection, customer preference analysis, network traffic monitoring, data security, and so on.

5 BIG DATA MARKET, BY REGION

5.1 NORTH AMERICA

The adoption of big data solutions is expected to be the highest in North America, as compared to the other regions. This is mainly because of the presence of various developed economies, such as Canada and the US, and due to the focus on innovations obtained from R&D and various technologies. North America, a hub of data generation in large quantities, is the largest market for big data solutions, with a share of XX% in the global market. The high penetration of big data in multiple verticals is driving the growth of this market in this region. The North American region has been extremely open toward adopting any new and innovative technologies and is expected to provide market growth opportunities to big data vendors, as it is expected to witness an exponential growth of IT device-based generated data and stringent laws and policies for safeguarding the data. Consequently, the big data components are said to be showing strong positive trends in the region, as several companies and industries are adopting big data solutions and services at various levels as a part of their growth strategies to strive in the market and increase the efficiency of IoT data for enhancing their overall productivity.

6 COMPETITIVE LANDSCAPE

6.1 HISTORIC REVENUE ANALYSIS

Players in the big data market were identified through secondary research. The share of each market player, in terms of value, was inferred from annual reports, presentations, and secondary research sources. Primary research interviews were conducted with key opinion leaders, such as CEOs, directors, industry experts, and other executives to validate the revenue and market shares.

FIGURE 7 HISTORIC REVENUE ANALYSIS FOR LEADING PLAYERS, 2016–2020

Source: Company Website, Annual Reports, and SEC Filings

The global big data market is competitive with five players: IBM, Microsoft, Oracle, AWS and SAP—accounting for XX–XX% market share. From the figure provided above, it can be understood that the business revenue for most major players has slightly declined in the last two years and is expected to fall further, which can be attributed to the outbreak of the COVID-19 pandemic. Some of the reasons for the decline in revenue growth could be the serious recession faced by the global economy, along with the slow demand and supply in 2020.

7 COMPANY PROFILES

7.1 INTRODUCTION

This section provides a brief overview of the major players operating in the big data market. It comprises information about solutions and services; key strengths, weaknesses, and competitive threats; and recent developments during the last three years of the top players in the big data market. It analyzes the organic and inorganic growth strategies adopted by various players in the market to expand their global presence and increase their share. The major players of the big data market generate a significant portion of their revenue from North America, followed by Europe and APAC.

7.2 MAJOR PLAYERS

7.2.1 IBM

7.2.1.1 Business overview

IBM is a multinational technology and consulting corporation offering infrastructure hosting and consulting services. The company operates through five major business segments: cloud and cognitive software, global business services, global technology services, systems, and global financing. IBM Cloud has emerged as a preferable platform for all business applications, as it is AI compatible. It is a unifying platform that integrates IBM's capabilities with a single architecture and spans over public and private platforms. With this powerful cloud platform, the company can cater to the requirements of different businesses across the globe. IBM caters to various verticals, including aerospace & defense, education, healthcare, oil & gas, automotive, electronics, insurance, retail & consumer products, banking & finance, energy & utility, life science, telecommunication, media & entertainment, chemical, government, manufacturing, travel & transportation, construction, and metals & mining. The company has a strong presence in the Americas, Europe, the Middle East, Africa, and APAC and has clients in more than 175 countries. IBM is one of the major players in the big data market. In the past two years, it has shifted its focus from the hardware segment to the digital segment, with increased investments toward big data, AI, and ML.

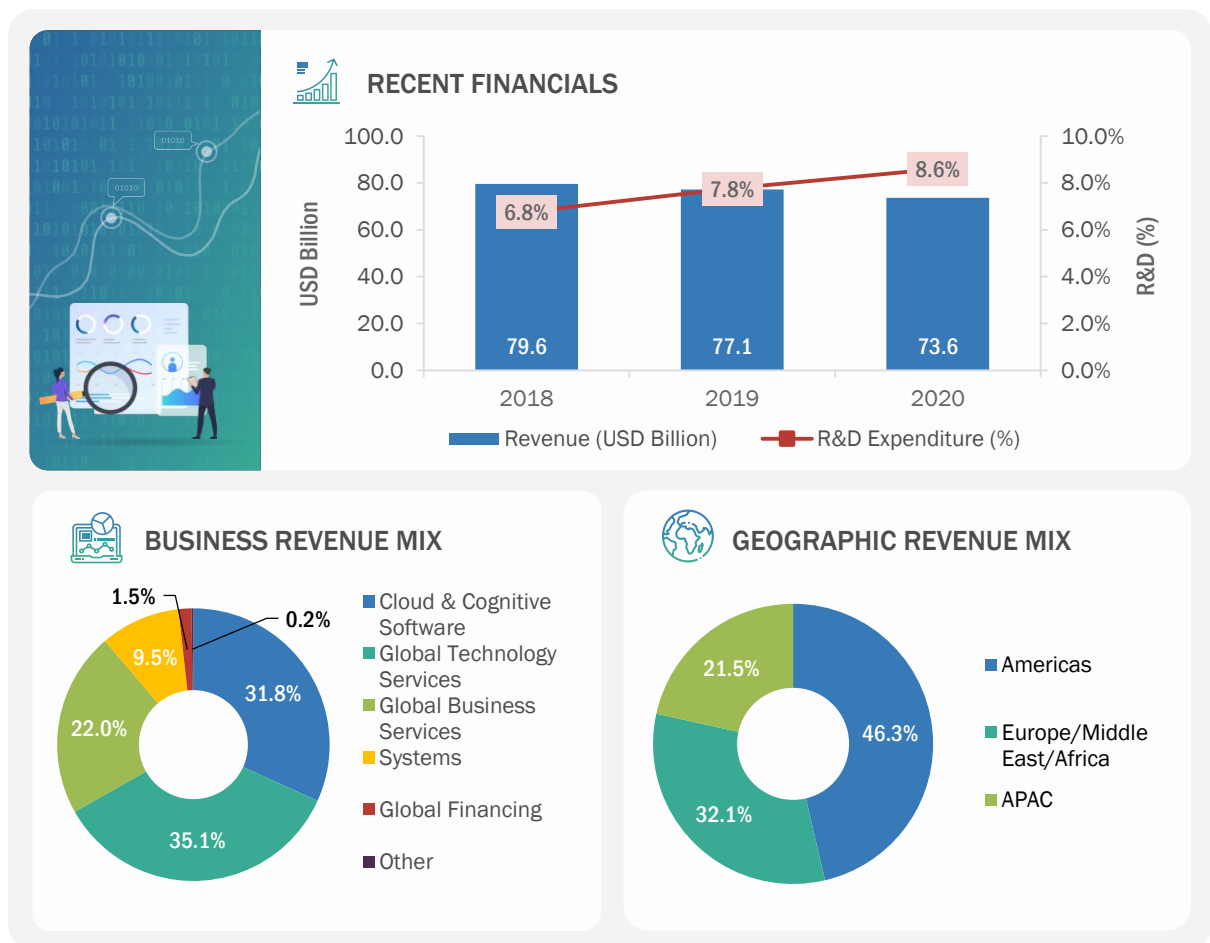

In the big data market, IBM offers various solutions, including IBM BigIntegrate, IBM Db2 Big SQL, IBM Big Replicate, IBM BigQuality, IBM InfoSphere Data Replication, IBM Master Data Management, and Predictive Analytics. These solutions help businesses visualize, analyze, and share insights about their performance. The company offers managed and professional services in cloud environments.
